About VVend

VVend is the neighbourhood market's system: from the till to the shelf, from purchasing to the customer's tab.

Who it is for

- **Markets, grocers and supermarkets** that want to sell, buy and look after stock in one place.
- **The market's staff**: the cashier, whoever buys, whoever restocks and whoever runs payroll.

What it does

- **Till:** sells by barcode or by the scale, takes cash, the card machine, Pix into the market's own account or the customer's account, and prints the receipt.
- **Stock:** shelf, back room, lots and expiry dates, with a nudge when it is time to restock.
- **Purchasing:** each supplier's price by quantity, quotes, the order and the chat over the market's own WhatsApp.
- **The customer's account:** credit, prepaid, loyalty points and the weekly basket.
- **Shop and offers:** a public page and the offers on the store's TV, with the market's brand and, if it wishes, its own domain.
- **Staff payroll.**

It runs in the browser, on a computer, a tablet or a phone.

What it is not

VVend does not issue tax invoices yet: its receipt is not a tax document. And sales money never goes through us: it goes straight to the market.

Who makes it

VVend is made by **Fireho**, from Monte Santo de Minas, MG, Brazil.
